I am seeking a full stack web development position at a company where I can hone my technical skills and grow as a developer while having a real impact on the tasks assigned to me. I am meticulous, ambitious, and highly motivated. Coding is my passion and my hobby and I look forward to bringing my diverse range of skills to my next career endeavor.

Recent Professional Experience

Senior Full Stack Software Engineer - Payments - LTK / RewardStyle, Inc.

Feb 2022 - Current

Responsibilities

- Architect scalable and maintainable web applications served to users across the globe.
- Design and develop flexible payments systems for US and international users.
- Develop full stack web applications with Golang backend and Vue frontend.
- Lead international engineering resources.
- Improve overall technical maturity of the engineering department.
- Provide guidance and mentorship for junior engineers.
- Internationalization and localization of product space.

Full Stack Software Engineer - GreenLight IoT, Inc.

Mar 2020 - Feb 2022

Responsibilities

- Work within a team to design and develop the company's SaaS platform.
- Modern Angular frontend development using industry accepted best practices.
- Backend microservice development using NodeJS, NestJS, and Fastify running on AWS infrastructure.
- MongoDB database design, deployment, and maintenance.
- Service deployment and orchestration via AWS solutions including EC2 and ECS.

Chief Technology Officer - My Broken Phone LLC. Tampa, FL

Mar 2016 - Mar 2020

As the primary leader of the company I directed long term business strategy as well as established company operational policies and processes aimed to align all team members with a common focus toward achieving growth.

Responsibilities

- Create, review, and implement business and marketing strategies.
- Handle accounting and budgeting.
- IT and website maintenance and development.
- Personnel management including hiring, onboarding, and training.

Achievements

- Redesigned and rebuilt the company website from the ground up.
- Built custom integrations between our CRM, website, and Slack.
- Established company wide policies and procedures.
- Restructured company management to facilitate operational consistency.
- Used market research campaigns to identify a valuable target market.
- Established new company brand positioning to better focus on a target market.

Notable Demonstrable Project

My Broken Phone Website - <https://mybrokenphone.com/>

Company Website

With the goal of speed, user experience, and mobile responsiveness, I completely redesigned and rebuilt our company website. The website was built using Express JS running on an AWS Node server utilizing MySQL for data storage. Customer interactions were integrated directly into our CRM using an available API.

Relevant Skills

- Understanding and extensive experience with Javascript ES6 syntax as well as promises and async/await.
- Technologies such as **Go, Typescript, NodeJS, Angular, MongoDB, AWS, Fastify, Express, NestJS, NGRX, Xcode, Swift, Git, and Jenkins.**
- Microservice architecture
- Continuous integration and continuous deployment
- Docker and AWS ECS
- OO and functional programming concepts.
- Sufficient understanding of web security and attack vectors such as XSS.
- Avid Linux user.
