I am seeking a senior level full stack software engineering position at a company where I can exercise my 8+ years of experience as a developer while having a real impact on business growth and sustainability. I am highly passionate about software development and look forward to bringing my diverse range of skills to my next career endeavor.

Recent Professional Experience

Senior Full Stack Software Engineer - Payments - LTK / RewardStyle, Inc.

Feb 2022 - Current

- Responsible for architecting and building scalable web solutions for a platform served to 40 million monthly active users across the globe.
- Designed and developed a flexible marketplace SaaS payments system for US and international users supporting \$4.1B in annual GMV.
- Worked in full stack API and web application development with Golang, Vue, MySQL, and AWS Cloudformation.
- Served as technical lead for offshore “Vietsoft” team responsible for accelerating delivery of high impact projects across the organization including i18n/l10n.
- Selected to be part of a high profile, autonomous innovation team focused on delivering step change improvements in customer ROI.

Full Stack Software Engineer - GreenLight IoT, Inc.

Mar 2020 - Feb 2022

- Lead engineer responsible for design and development of multiple B2B SaaS products used by Fortune 500 companies.
- Worked across the stack leveraging Angular, React, Typescript, NodeJS, NestJS, and Fastify running on AWS infrastructure.
- High performance MongoDB database design, deployment, and maintenance.
- Responsible for service deployment and orchestration via AWS solutions including EC2 and ECS.

Chief Technology Officer - My Broken Phone LLC.

Mar 2016 - Mar 2020

- Leveraged my software engineering background to deliver high impact projects which allowed me to quickly progress through the company.

- Designed and built bespoke technical solutions for the business including a public website with thousands of monthly visits.
- Developed a platform for receiving and managing customer quote requests which resulted in a 45% increase in closed deals.
- Developed a real time task management platform for simplified management across multiple brick and mortar locations resulting in a 22% improvement in customer satisfaction (NPS).
- Outside of engineering, I was also the leader of daily operations, marketing strategy, personnel management, and business development.

Freelance Web Developer - CarbonBuild LLC.

Jan 2012 - July 2019

- Developed customized website and API solutions for multiple brands throughout the US.
- Worked as a solo owner-operator responsible for all business operations from client acquisition to product delivery and support.
- Delivered technical solutions across a wide variety of technologies from HTML/CSS/JS built landing pages to CRM managed websites to full featured web applications running on NodeJS.

Notable Demonstrable Project

The Purge Collection - <https://purgecollection.com/>

My most recent personal project is a transactional platform that connects sellers of rare items with collectors. This project is built with Angular, Typescript, Express (NestJS) and includes features such as user management, shipping label purchases, invoicing, and real time purchasing.

Relevant Skills

- Technologies such as **Go, Typescript, NodeJS, Angular, SQL, MongoDB, AWS, Vue, React, Fastify, Express, NestJS, NGRX, Xcode, Swift, Git, and Jenkins.**
- Globe-scale system architecture
